

GREENMAX BRO 4B

STYROFOAM BALER

The EPS Revolution Starts Here.

INTCO is the only company in the world that both reclaims Styrofoam waste and uses it to manufacture new products.

We invented **GreenMax** compactors to give businesses and municipalities an affordable and clean way to compress Styrofoam into widely used EPS block.

INTCO uses EPS block to make sustainable GreenWood products — picture frames and decorative moldings that look like rare and precious woods. INTCO will guarantee to purchase all your EPS block from you at market price* **GreenMax** makes it profitable for municipalities and businesses to recycle Styrofoam.

Most **GreenMax** customers begin to earn a return on their investment in six months or less.

Customer Benefits:

- Save money on landfill/waste removal
- Earn income from EPS block
- Earn public relations points as a green business
- Simple, safe, one-person operation
- Cold compress means no fumes and minimal electrical requirements
- One-year full service warranty included
- Guaranteed EPS material purchase at market price, FOB, for as long as you own your machine

Community Benefits:

- Reduce landfill volume by 10 – 20%
- Reduce energy used in waste hauling
- Save precious hardwood and rainforest trees (GreenWood products)

* INTCO reserves the right to inspect material before purchase to make sure it is free from construction debris or other contaminants. Clean food packaging is permitted. Purchases will be made in full container units only. Like all commodities, the price of EPS block fluctuates. The fairest way to work is to honor the marketplace.

1

Our GreenMax C100 compactor compresses 220lbs of eps material per hour.

Our GreenMax C200 compactor compresses 440lbs of eps material per hour.

2

The GreenMax compactor compresses the eps into blocks that are easy to store.

Intco Recycling loads the blocks onto their trucks for recycling.

3

The eps blocks are then reprocessed into pellets that are used to create other products.

4

Products such as frames, moldings, and construction insallation are just some of the products that are manufactured out of the eps pellets.

GREENMAX BRO 4B The GreenMax Compactor pays for itself in nine months*

STYROFOAM BALER

The purpose of compacting eps material is to reduce volume and increase density making it easier to haul away. **GreenMax** compactors produce high density logs allowing trailers to be loaded to maximum weight.

The **GreenMax** Compactor comes in two sizes to accommodate both large and smaller facilities. Both size machines will compress enough eps logs to see a return on your investment within 9 months or a year.*

The chart below illustrates the ROI using a **GreenMax** C200 compactor.

This illustrates estimated return on investment using the GreenMax C200.
